

1865.

QUEENSLAND.

FIFTH ANNUAL REPORT

ON

REGISTRATION OF BIRTHS, MARRIAGES, AND DEATHS.

Presented to both Houses of Parliament by Command of His Excellency the Governor.

Registrar General's Office,
Brisbane, 15th August, 1865.

SIR,

I have the honor to forward to you, for presentation to Parliament, the Fifth Annual Report on the Vital Statistics of Queensland for the year 1864.

The growing population, and the additional area occupied during the past year, have rendered necessary the creation of several new Registration Districts; they now number twenty-five (*vide* *Appendix No. 3*), and extend from the northern boundary of the Colony of New South Wales, in latitude 31° south, to the extreme northern point of the Australian Continent at Cape York, in latitude 11° south. This wide extent of country, spreading over twenty degrees of latitude, and running from the temperate far into the torrid zone, necessarily includes climates varying in temperature, in humidity, and in salubrity. The changes, however, are hardly so marked as those found in other countries of similar extent. From north to south the climate still remains essentially Australian, and well suited to European constitutions. At Cape York, where the healthiness of the European inhabitants is remarkable, the mid-day heat is not greater than it is at Brisbane, although the average reading of the thermometer for the year will doubtless be found higher, the temperature being more even. Inland, on the elevated table-lands, whether at the Valley of Lagoons, in latitude 19° south; or the Peak Downs, in latitude 22° south; or on the Darling Downs, in latitude 28° south, the climate still shows the usual Australian peculiarities observable in its highest elevation, and differing but little in temperature, the summer sun being everywhere equally hot, and the winter nights equally cold. It is very desirable that meteorological observations should be taken at as many places on the seacoast and in the interior as possible; and it is believed that the establishment of telegraphic offices will offer facilities for so doing, at a small outlay. There is still much to be learnt of the climate of the country we inhabit, and individual opinions are not to be trusted, for as each person speaks according to his own personal sensations, and not according to any trustworthy standard, the most contradictory statements are made. In the Appendix to this Report will be found the meteorological tables for the year 1864, taken in Brisbane. They have in former years been published in the Annual Statistical Register, but will for the future be annexed to the Yearly Report on the Vital Statistics of the Colony, as their more appropriate position.

The population of Queensland, on the 31st December, 1864, is estimated to have consisted of 45,516 males, 28,520 females, and the total number of persons to have been 74,036. The mean population of the year is calculated to have been 41,548 males, 26,290 females, and 67,838 persons. The total increase in population which took place during the year 1864 was 12,396 persons, and the portion of this increase which more immediately concerns this Report, viz., the increase arising from the greater number of births than of deaths, was 1,437 persons, divided over the year in the following proportion:—

	Males.	Females.	Persons.
Excess of Births over Deaths during First Quarter	30	156	186
Excess of Births over Deaths during Second Quarter	142	233	375
Excess of Births over Deaths during Third Quarter	224	291	515
Excess of Births over Deaths during Fourth Quarter	176	185	361
Total increase during the year	572	865	1,437

Comparing these figures with the mean population of the year as above given, the annual ratio of increase from natural causes alone is, of males, 1·38; of females, 3·29; and of persons, 2·12.

The

Centesimal increase for five years.

The centesimal rate of increase of population arising from the greater number of births than of deaths for each year, since the foundation of the Colony, and calculated on the mean population of each year, is given in the following table:—

1860	2.81
1861	2.92
1862	2.27
1863	1.75
1864	2.12

It will be seen that the rate of increase last year is materially greater than in 1863, nearly returning to the ratio of former years. This improvement is attributable in almost equal proportions to an increase in the proportional number of births, and to a decrease in the proportional number of deaths. In 1863 the births were to the mean population as 4.12 per cent, and the deaths as 2.36 per cent.; in 1864 the births were as 4.25 per cent., and the deaths as 2.13 per cent.

Causes of the high rate of increase.

The above rate of increase, 2.12 per cent., is exactly 1 per cent. higher than the average English rate. It is almost entirely traceable to the larger proportion that births bear to the population, and not to any great difference in the mortality of the two countries, and it can hardly be expected to continue, in the face of the diminution which is yearly apparent in the proportionate number of the female part of the population. On the 31st December, 1863, there were in the Colony of Queensland 64.03 females to each 100 males; on the 31st December, 1864, there were only 62.66 females to each 100 males. It may appear somewhat paradoxical that the birth rate should be so large in a population possessing such a small proportion of females, but it is easily explained by the comparatively small number of female children, and the consequently large proportion of females between the ages of 15 and 35. The last five years give a mean of 10.94 births to each 100 females in the Colony.

BIRTHS.

Birth-rate of the year.

The total number of Births registered during the year 1864 is 2,883, consisting of 1,472 males, and 1,411 females. The Births registered in the year 1863 numbered 2,221—males, 1,094; females, 1,127. There is, therefore, an increase in the latter year in the total number of births at the rate of 29.81 per cent.; this is greater than the rate of increase in the mean population during the year, viz., 25.70 per cent. If the births of the year be compared with the mean population, they are in the proportion of one birth to every 23½ persons; in 1863 the proportion was one birth to every 24 persons. The English rate, on an average of 22 years, is one birth to every 30 persons. The proportion in New South Wales, calculated on an average of seven years, commencing with 1857, is one birth to every 23 persons.

Ratio of births to female population.

The number of Births to every 100 females in the mean population of Queensland, is as follows:—Year 1860, 11.24; 1861, 11.26; 1862, 10.71; 1863, 10.53; 1864, 10.97: mean, 10.94.

MARRIAGES.

MARRIAGES.

The number of Marriages celebrated in 1864, is 951; in 1863, the number was 774; the increase is therefore at the rate of 22·87 per cent, nearly ten per cent. smaller than the rate of increase in the mean population. Marriages of the last two years compared.

The annual proportion of persons married to each 1000 inhabitants of the Colony, estimated on the mean population of each year, since the foundation of the Colony, is given below:—

1860, 17·65; 1861, 20·07; 1862, 25·62; 1863, 28·68; 1864, 28·01: mean of 5 years, 24·00. Marriage rate per thousand during five years.

The number of Marriages in any country is generally considered as one of the most certain indexes of general prosperity and plenty, of abundance of money, and of a high rate of wages. In England, the marriage rate is 16·40 to each 1,000 inhabitants; in New South Wales, it appears by the Eighth Annual Report from the Registrar-General of that Colony, on an average of seven years, commencing with the year 1857, to be 18·76 persons married to each 1,000 persons of the mean population.

The passing of *The Marriage Act of 1864* (28 Victoria, No. 15), has introduced several improvements of great importance into the law affecting the celebration of Marriage in Queensland. The Act did not, however, come into operation until the beginning of the year 1865. Most of its provisions have no direct bearing on the subject of this report, but the new form of the certificate of marriage, requiring the age, birthplace, and parents' names of the bride and bridegroom, in addition to the particulars required in the old form, will greatly facilitate the identification of the parties, and will besides render the statistical tables much more complete. Marriage Act of 1864.

DEATHS.

Ratio of deaths to population.

The number of Deaths registered in the year 1864 was, of males, 897; of females, 546; of persons, 1,443: being, when compared with the total population, at the several rates of 1·32 per cent. for males; of 0·80 per cent. for females; and of 2·13 per cent. for persons, calculated on the mean population of the year.

Calculated on similar data, the mortality of the last five years is as follows:—

Years	1860	1861	1862	1863	1864	Mean of 5 years.
Per centage of Deaths...	1·77	1·56	2·01	2·36	2·13	1·97.

The mortality of last year is less than that of 1863, but is greater than that of former years. The average mortality of England and Wales is estimated at 2·20 per cent. of the population; of Scotland, at 2·10 per cent.; of New South Wales, 1·75 per cent.

DEATHS in the years 1863 and 1864.

Variation of death-rate with the season.

The influence of the seasons on the rate of mortality is a subject of importance, and the following table has been prepared to afford information relating thereto:—

VARIATION of the RATE of MORTALITY during the Four QUARTERS of the Year.

YEAR.	ANNUAL DEATH RATE DURING				
	First Quarter.	Second Quarter.	Third Quarter.	Fourth Quarter.	The whole Year.
1860	2·36	1·60	1·53	1·63	1·77
1861	1·93	1·57	1·26	1·58	1·56
1862	2·04	1·92	1·62	2·38	2·01
1863	3·06	2·44	1·83	2·24	2·36
Mean of Four Years...	2·35	1·88	1·56	1·96	1·93
1864	2·40	2·26	1·73	2·17	2·13
Mean of Five Years...	2·90	1·96	1·59	2·00	1·97

The

The above table gives the annual rates of mortality which have prevailed during each quarter for the quinquennial period ended 31st December, 1864. Read horizontally, the table shows the relative mortality at different seasons; read in columns, it shows the variations of the rate at the same season from year to year. The third quarter in each of the five years was the healthiest, and its rate of mortality, not only the lowest, but the steadiest, having varied only 0·57 per cent. during the period comprised in the table. In the fourth quarter the mortality increased, the variation of the rate in the different years also increased, amounting to 0·80 per cent. The rise of the death rate continued in the first quarter, and the numbers in the table show that this is the least healthy season, and the season when the greatest fluctuations in the rate occur from year to year; the highest and lowest rates in this column differing by 1·13 per cent. In the second quarter, the rate again declined, descending in two of the years even slightly below the rate of the corresponding fourth quarters. Whether the mean of four years be taken, or of five, it appears that the first quarter is the least healthy season, that the mortality lessens in the second quarter, becomes a minimum in the third quarter, and again rises in the fourth quarter.

The following table is compiled for the purpose of showing the average age at the time of death. The calculations are made separately for the Metropolitan District, and the sexes are also distinguished. Compared with the similar table published for the year 1863, it is satisfactory to observe an increase in the average duration of life under each separate head:—

DISTRICTS.	MALES.			FEMALES.			PERSONS.		
	Number of Deaths.	United Ages. in Years.	Average Age at Death in Years.	Number of Deaths.	United Ages. in Years.	Average Age at Death in Years.	Number of Deaths.	United Ages. in Years.	Average Age at Death in Years.
Metropolitan District ...	302	5,233	17·33	230	2,919	12·69	532	8,152	15·32
All other Districts ...	541	12,603	23·30	296	8,766	12·72	837	16,369	19·68
The whole Colony...	843	17,836	21·16	526	6,685	12·71	1,369	24,521	17·91

Infantine mortality appears, by the following tables, to have slightly diminished; it is, in fact, satisfactory to find the proportion last year to be below the average of the last five years; still, however, more than one-quarter of all the deaths in the Colony is of children below one year of age, whilst one half is of young persons below ten years of age.

Dr. Farr's system of classifying causes of death.

The colonies of Victoria and of New South Wales, have remodelled their Nosological Tables, so as to correspond with the modifications introduced into the English tables by Dr. Farr, and I have thought it right to follow their example, as, by so doing, comparison is facilitated, and the value of the tables increased. This system of classification of causes of death will be best understood by an examination of the following recapitulatory statement, or condensed summary of the Nosological Tables in Appendix No. 1, which also exhibits the more prominent results of the application of the system to the Deaths registered in Queensland during the year 1864:—

ZYMOTIC DISEASES.

CLASS I.	Per centage.
Order 1.—Miasmatic Diseases.—Scarlatina, Diphtheria, Dysentery, Fevers, &c. ...	28.70
Order 2.—Enthetic Diseases.—Syphilis, Gonorrhœa, &c....	0.21
Order 3.—Dietic Diseases.—Privation, Scurvy, Delirium Tremens, &c. ...	1.80
Order 4.—Parasitic Diseases.—Thrush, Worms, &c. ...	0.55
	31.26

CONSTITUTIONAL DISEASES.

CLASS II.	
Order 1.—Diathetic Diseases.—Gout, Dropsy, Cancer, &c. ...	2.14
Order 2.—Tubercular Diseases.—Scrofula, Phthisis, Hydrocephalus ...	6.92
	9.06

LOCAL DISEASES.

CLASS III.	
Order 1.—Nervous.—Apoplexy, Paralysis, Insanity, Cephalitis ...	9.41
Order 2.—Circulation.—Pericarditis, Aneurism, Heart Disease...	2.97
Order 3.—Respiratory.—Bronchitis, Pneumonia, Asthma, Pleurisy ...	4.36
Order 4.—Digestive.—Gastritis, Enteritis, Peritonitis, Hernia ...	4.15
Order 5.—Urinary.—Nephritis, Ischuria, Diabetes, &c....	0.69
Order 6.—Generation.—Ovarian Dropsy, Uterus Disease, &c.
Order 7.—Joints.—Arthritis, Ostitis, Periostitis, &c. ...	0.14
Order 8.—Integumentary.—Phlegmon, Ulcer, Skin Disease ...	0.07
	21.79

DEVELOPMENTAL DISEASES.

CLASS IV.	
Order 1.—Children.—Cyanosis, Teething, &c. ...	5.05
Order 2.—Adults.—Paramenia, Childbirth, &c. ...	0.82
Order 3.—Old People.—Old Age, &c. ...	1.87
Order 4.—Nutrition.—Atrophy, Debility... ..	4.63
	12.37

VIOLENCE.

CLASS V.	
Order 1.—Accident or Negligence.—Fractures, Contusions, Burns, Drowning, Suffocation, Wounds, &c....	12.03
Order 2.—Wounds in Battle.—Gunshot Wounds, Sword, Bayonet, or other wounds	1.31
Order 3.—Homicide.—Murder and Manslaughter ...	1.31
Order 4.—Suicide.—Poison, Drowning, Hanging, &c. ...	1.24
Order 5.—Execution.—Hanging	0.07
	14.65
Sudden Deaths, cause not ascertained	0.21
Unspecified	10.65
	10.86

The

The following table presents, at one view, the actual number of Births and of Deaths, male and female, which have been registered in each Registration District throughout the Colony, and the consequent increase or diminution of the population arising therefrom, the latter being distinguished by the negative sign —

1864.

DISTRICT.	BIRTHS.			DEATHS.			Excess of Births of Males over Deaths of Males.	Excess of Births of Females over Deaths of Females.	Total excess of Births over Deaths.
	Males.	Females.	Total.	Males.	Females.	Total.

TOTAL	1,472	1,411	2,883	900	546	1,446	572	865	1,437

¹ Including also the new registration districts of Cardwell and Mackay.

² Including also the new registration district of St. George.

An examination of the tables in the Appendix hereto, and of the comparisons made in this Report between the registrations of the year 1864 with those of former years, leads, I think, to the conclusion that Births have been, in proportion to the mean population of each year, above the average of the last five years; that Marriages also bear, in like manner, a larger proportion to the mean population than is shown to be the average of the last five years; but that deaths, although in a smaller proportion to the population than in the previous year 1863, are still above the average of the last five years; that Infantile Mortality, that is of children below one year of age, has, with the exception of the year 1862, which shows a slight increase on the preceding year, steadily diminished during the last five years, but that as regards the mortality at other ages, the fluctuations have been greater, and the results of last year's registrations neither so satisfactory nor so decided.

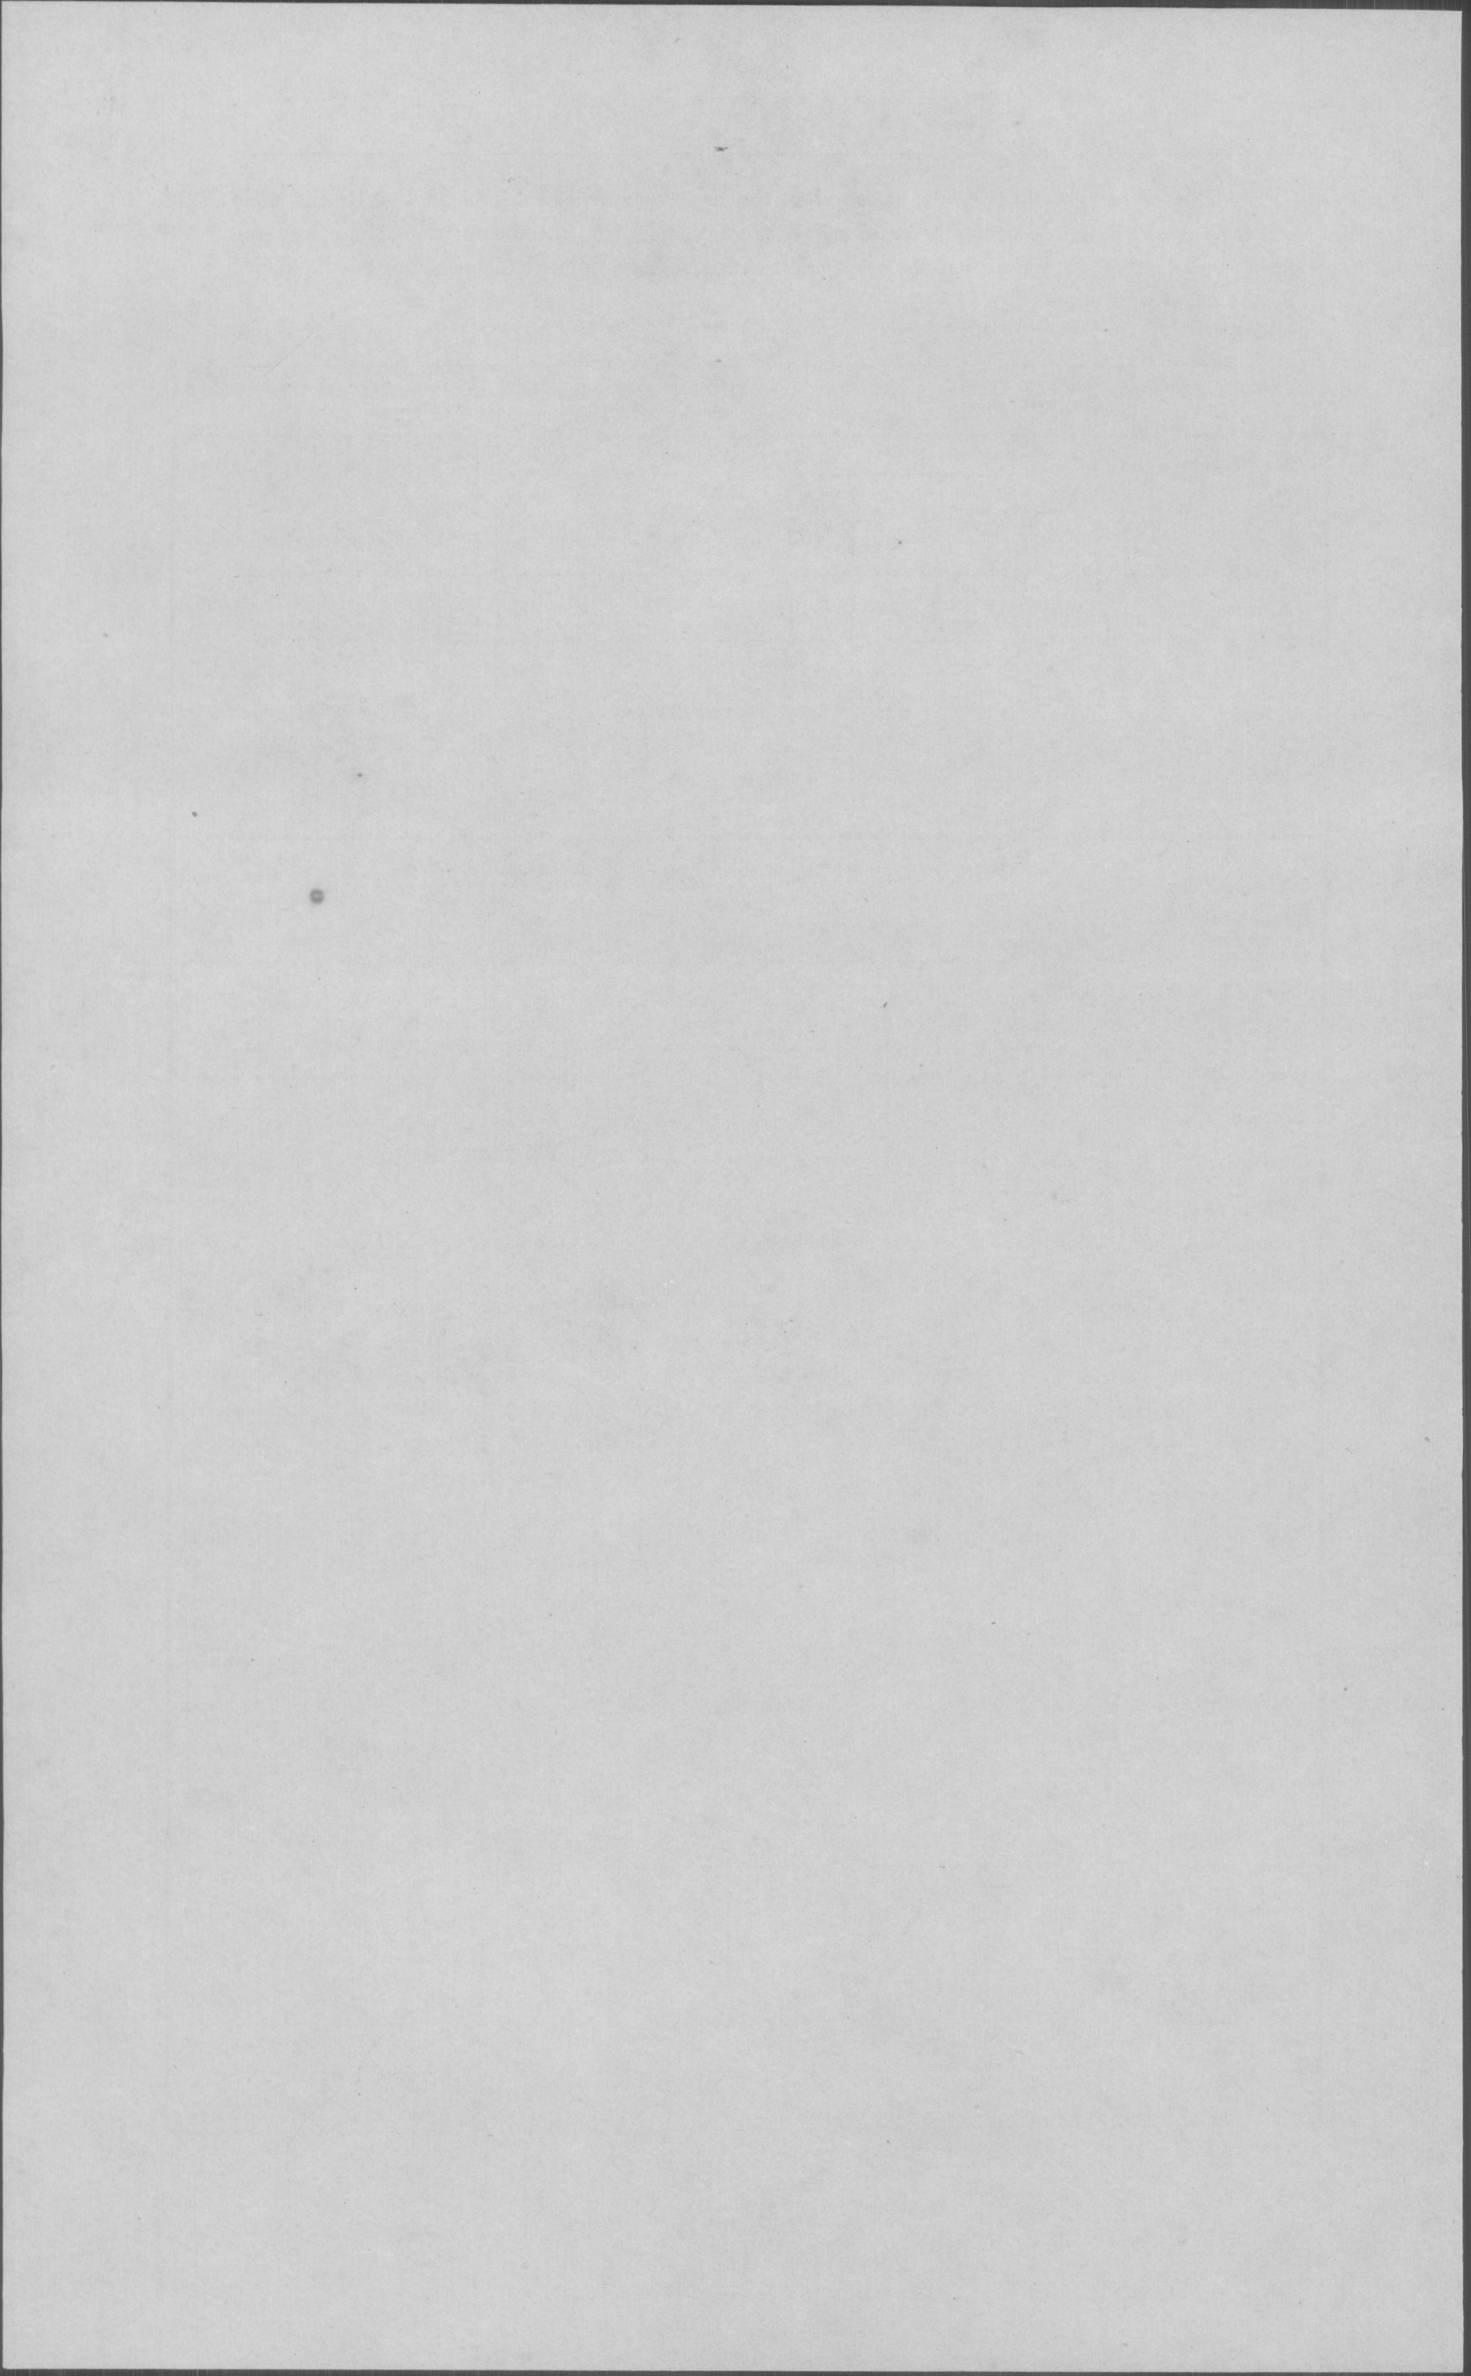

I have the honor to be,

Sir,

Your obedient Servant,

F. O. DARVALL,

Registrar-General.

APPENDIX TO REGISTRAR-GENERAL'S REPORT ON THE VITAL STATISTICS OF
QUEENSLAND, FOR THE YEAR 1864.
